About this guide

Welcome

This guide describes how to setup and get started using your Nortel Networks i2002 Internet Telephone.

Topics include:

- [Setting up and initializing your i2002 Internet Telephone](#)
- [Introducing your i2002 Internet Telephone](#)
- [Configuring the i2002 Internet Telephone](#)
- [Making calls](#)
- [Managing your calls](#)
- [Advanced features and services](#)
- [Troubleshooting](#)

For a brief overview of how to use the SIP Multimedia PC Client to control your i2002 Internet Telephone, see [Appendix A, “Using the Multimedia PC Client and the i2002 Internet Telephone,”](#) on page 83.

[Appendix B, “Setting DHCP parameters,”](#) on page 85 provides details about how to set up telephones that are not already configured.

For a list of telephone parts numbers and where to go for help refer to [Appendix C, “Customer support,”](#) on page 91.

Audience

This guide is intended for subscribers of the i2002 Internet Telephone services and features.

Text conventions

This guide uses the following text conventions:

bold text	Indicates the i2002 softkey you need to press Example: Press the Ok softkey.
<i>italic text</i>	Indicates new terms, document titles Example: See the <i>i2002 Internet Telephone User Guide</i> .

Acronyms

This guide uses the following acronyms:

DHCP	Dynamic Host Configuration Protocol
DND	Do Not Disturb
DTMF	Dual Tone Multi Frequency
ISDN	Integrated Services Digital Network
IM	Instant Message
IP	Internet Protocol
IPCM	Internet Protocol Client Manager
LAN	Local Area Network
LCD	Liquid Crystal Display
MAC	Media Access Control
QoS	Quality of Service
SIP	Session Initiation Protocol

VoIP

Voice over IP

WAN

Wide Area Network

How to get help

For service issues, please contact your local support or Information Services team.

x About this guide

Chapter 1

Setting up and initializing your i2002 Internet Telephone

This section describes how to setup and initialize your i2002 Internet Telephone. Topics include:

- [Setup: Before you begin](#)
- [Installing your i2002 Internet Telephone](#)
- [Initializing your i2002 Internet Telephone](#)
- [Resetting your i2002 Internet Telephone](#)
- [Upgrading firmware](#)

Note: Contact your system administrator to ensure that your network is prepared for you to setup and initialize your i2002 Internet Telephone.

Setup: Before you begin

Before you begin setting up your telephone, check to see that you have the following components:

- i2002 Internet Telephone set
- telephone handset
- telephone handset cord
- i2002 base
- AC adapter
- ethernet cable

2 Chapter 1 Setting up and initializing your i2002 Internet Telephone

- active LAN connection

Note: Optional keycaps for the buttons can be installed on your i2002 Internet Telephone. Refer to the installation manual packaged with these optional keycaps for further information.

The following picture shows an i2002 Internet Telephone:

Installing your i2002 Internet Telephone

Warning: Severe damage will occur if this set is plugged into an ISDN connection. Contact your administrator to ensure that you plug the set into a 10/100-BaseT Ethernet jack.

To connect your i2002 Internet Telephone

- 1 Connect one end of the handset cord to the handset jack (identified with a handset icon) on the telephone base, and connect the other end of the handset cord to the handset.
- 2 Choose one of the following connections:
 - a For a telephone not sharing a LAN access with a PC:

Connect one end of the Ethernet cable to the Ethernet plug (identified with a network icon) on the telephone, and the other end to your 10/100-BaseT Ethernet jack.
 - b For a telephone sharing a LAN access with a PC:

Complete step a and connect one end of a second Ethernet cable to the PC Ethernet port (identified with a PC icon) on the back of the telephone and the other end to the computer's Ethernet port.
- 3 Plug the AC adapter plug into the base of the telephone.
- 4 Plug the AC adapter into the nearest electrical outlet.
- 5 Ensure that your power cable and handset cable are properly fitted into the provided slots.
- 6 Once the power cable and handset cable are secured tightly in place and flush with the bottom of the phone set, take the base and hinge it into the plastic slots at the front of the phone set. Then, press down firmly until the base snaps into place.

Tip: If you have trouble locking the base, or if the phone wobbles on your desktop, re-examine the phone's cables to ensure the cables are not obstructing the base.

Initializing your i2002 Internet Telephone

When you power up the i2002 Internet Telephone for the first time, you will see the introduction screen with a flashing Nortel Networks display as shown in the following picture:

 **Tip:** Your i2002 Internet Telephone may be pre-configured, or may require a partial or total initialization. Refer to the following table.

When you power up your i2002 Internet Telephone ...	Then
<p>if the display shows that the server is unreachable and continuously resets</p> <div>Server unreachable restarting ...</div>	<p>go to “Setting DHCP parameters” on page 85 and follow the steps in the order they appear.</p>
<p>if the telephone successfully connects to the server and the display prompts you to enter an activation key</p> <div>Activation key > Ok Alpha Lang</div>	<p>go to “Step 1: Enter an activation key” on page 5.</p>

When you power up your i2002 Internet Telephone ...	Then
<p>if the telephone successfully connects to the server and the display prompts you for your login id</p> <div><div>ID ></div><div>LoginNoAlphLang</div></div>	<p>the i2002 has been provisioned but a user has not been assigned. Go to “Step 2: Logging in to your i2002 Internet Telephone” on page 6.</p>
<p>the telephone successfully connects to the server and the location prompt appears</p> <div><div>1. Other06/06 9:31 am</div><div>Select</div></div>	<p>you are ready to use your telephone. Go to “Step 3: Choosing your location” on page 7.</p>

Tip: You may need to contact your system administrator to determine the correct information to use during the initialization procedure.

Step 1: Enter an activation key

When the i2002 Internet Telephone successfully connects to the server, the Activation key screen appears.

Tip: Your system administrator will provide you with an activation key.

Activation key >

Ok

Alpha

Lang

Tip: If your i2002 Internet Telephone cannot locate the server, it will automatically retry every two minutes. After several attempts, if your telephone set does not locate the server, contact your system administrator for assistance.

Enter the activation key and press the **Ok** softkey, the following screen displays:

Provisioning ...

Ok

Alpha

Once the i2002 Internet Telephone is successfully provisioned then you may see an idle display that indicates you are ready to use the phone or, you may be prompted to log in.

Step 2: Logging in to your i2002 Internet Telephone

The device is ready for login, and the newly provisioned device idle screen displays. At the prompt, enter your username and password supplied by your system administrator. For instructions on how to enter alphanumeric information see [“Entering alphanumeric characters” on page 21](#). The following figure shows user "tom" logging in

ID >

Login

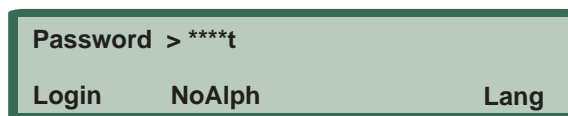

NoAlph

Lang

Tip: When typing in your user name, you only need to type in the "user" portion of the name, not the @domain portion.

The next figure shows user "tom" entering his password of "guest". As each character is entered the previous character is hidden with an asterisk. Non-alphanumeric digits are entered by first pressing the NoAlpha softkey.

Password > ****t		
Login	NoAlph	Lang

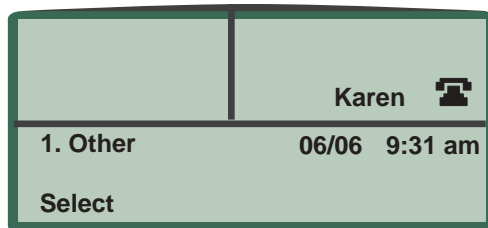

Tip: To change your password, refer to the *Personal Agent User Guide*.

After entering your password the Location prompt displays.

Step 3: Choosing your location

If the i2002 Internet Telephone has been provisioned into the database and a user has been assigned, then the location screen displays.

Karen 	
1. Other	06/06 9:31 am
Select	

Your system may serve different locations. For your own safety you must specify your location in order that emergency services can be routed to you if needed.

- 1 Use the up and down navigation buttons to scroll through the list of locations.
- 2 Highlight your location choice and press **Select**.

If you select **Other**, a warning message appears "Warning: A location was selected that may affect your emergency services. Display this warning in the future?". Select **Yes** or **No**. If you select Yes then you will be prompted with this warning every time you log in or when your telephone or server resets. If you select No then you will not see this warning again.

Note: If you move you can reset your location through the Config menu. Refer to [“Specifying location” on page 34](#) for instructions.

Step 4: Specifying login time

After choosing your location, the following screen appears.

To log in for a specified amount of time

- 1 Enter the amount of time you want to be logged in. Press the third softkey to change **Days** to **Hours**, as desired.
- 2 Then press the **Timed** softkey to log in for the specified amount of time. The system automatically logs you off after the specified time has elapsed.

To log in permanently

Press the **Login** softkey to use the network provisioned values. The system will automatically re-register you and you will remain logged in until you manually log off.

Once you are logged in the idle display appears.

Resetting your i2002 Internet Telephone

Use the Reset Phone option in the Config menu (see [“Resetting your i2002 Internet Telephone” on page 37](#)) or unplug your telephone.

Upgrading firmware

Tip: If there is a newer firmware load for your i2002 Internet Telephone then you need to upgrade.

When the display prompts you to upgrade your firmware

Install latest firmware?

Now

Later

Press the **Now** softkey to upgrade, or press the **Later** softkey and manually start the update at a later time through the Configuration menu (see [“Displaying i2002 Internet Telephone information” on page 36](#)).

Note: If you press the **Later** softkey then the system will periodically prompt you to upgrade.

Chapter 2

Introducing your i2002 Internet Telephone

This section describes the features and services available on your i2002 Internet Telephone and some basic functions to get you started using your phone. Topics include:

- [Features and services](#)
- [Useful terms](#)
- [Getting to know the i2002 Internet Telephone](#)

Features and services

Your i2002 Internet Telephone is a device that is as familiar and easy to use as your traditional telephone, yet capitalizes on all the new capabilities available from your internet connection. Here are some of the features and services:

- Hardware features
 - integrated 3 port switch (LAN, PC and internal port for voice)
 - high-quality Voice over IP (VoIP) sound
 - integrated headset jack
 - local generation of call alerting, call progress, and dial tones (as well as support for out-of-band DTMF signaling) to conserve valuable LAN/WAN bandwidth
 - dedicated hold, release, handsfree, headset, and mute buttons
 - user-selectable ringer, speaker, handset, and headset volume
 - multi-field LCD display for calling party number, and subject display (between SIP clients)
 - high fidelity, full-duplex speakerphone
 - hearing-aid compatible

12 Chapter 2 Introducing your i2002 Internet Telephone

- Software features
 - call forward, ignore, decline, and transfer
 - speed dial from an inbox, outbox or address book
 - conference, call waiting, do not disturb, and call hold
 - automatic registration on activation of the device
 - multiple user logon
 - inbox
 - outbox
 - address book
 - list of friends
 - search on a global address book
 - program keys to speed dial a specific number, send IM, Do not Disturb, call forward, presence, stock query
 - call park
 - message waiting indicator (set lamp lights red)
 - Meet Me audio conferencing (Refer to the *Personal Agent User Guide* for set up information and to the *Meet Me Audio Conferencing Quick Reference* for user information. This system feature is optional.)
 - roaming between domains in the same system (this feature is dependent on system provisioning, contact your system administrator for details).

Your i2002 Internet Telephone also provides features not available on traditional phone systems including:

- instant messages: Send, receive and reply to instant messages on your i2002 Internet Telephone.
- stock query: Obtain stock quotes directly on your i2002 Internet Telephone display.

Note: This feature may not be activated for your system. Contact your system administrator for more information.

- bulletins: Receive messages from your service provider, such as news of an upcoming system upgrade, directly on the display screen of your i2002 Internet Telephone.

- QoS: View and change the quality of service information for the media stream of the call on your i2002 Internet Telephone. Your service provider can use this information to analyze network performance.

Useful terms

The i2002 Internet Telephone may look like a regular telephone but there are some important differences that you need to keep in mind.

Multiple user logon

Your i2002 Internet Telephone can support up to four lines. That means that four different people can log in to a single i2002 Internet Telephone to receive and place calls. The first person who logs in to the telephone has the primary line. You can be logged in to several different Internet Telephones at the same time. If you have a job function that requires you to move around to different locations then you can always be sure that your calls will reach you.

Some menu options allow you to configure or view parameters that are specific to a line. If there are multiple users logged in to the telephone then you will be prompted to select your line button. If there are multiple users logged in, their individual line icon will blink to indicate when there is a voice mail or a feature is activated.

Address

When you enter an address to call someone, that can mean entering a telephone number or a SIP address. A SIP address is a unique identifier of users on the IP network. It has the same format as an email address, for example, `jdoe@lab1.org`, but it is not an email address. The characters before the `@` sign represent the username, in our example, `jdoe`. The characters after the `@` sign represent the domain name of the server, in our example, `lab1.org`. If you are located in the same domain as the user you are calling then you do not need to enter the domain name part of their SIP address (for example, `@lab1.org`).

The network can track where you are and route your calls when you log into any i2002 Internet Telephone with your SIP address. Using SIP addresses allows you to take advantage of other powerful features such as presence.

In order to make it easier to place calls, you can store addresses (SIP addresses or telephone numbers) in a personal address book.

Address book

Your personal network-based address book is a key tool for managing addresses. You can save your addresses for quick call access as well as organize addresses into groups. If you enter a nickname for an entry that you save in your address book, then that name appears on your display when the person calls you.

Inbox

Your i2002 Internet Telephone keeps track of all the calls you receive, which you can view by pressing the inbox button. Using the softkeys, you can view a list of all the people who have called you or just the calls that you have missed. With the press of a softkey you can dial entries from your inbox.

Outbox

Your i2002 Internet Telephone keeps track of all the calls you have made which you can view by pressing the outbox button. With the press of a softkey you can redial entries from your outbox.

Friends

Within your network-based address book you can designate entries as friends. If you have entered the SIP address of the person then you can see their online presence status.

Presence

Presence is a feature that allows you to see the online status of other users on the network and also a way to alert others to your status. Through the **View** menu you can change your presence status to let other users know if you are online or away from your desk. Through the **View** menu you can check the presence of the users you have designated as friends.

Meet Me audio conferencing

This system feature allows you to chair audio conferences by providing a dial in number and access code to participants. The chairperson activates the conference with their own password and the Meet Me audio conference window shows who has joined the conference.

Users with access to the Personal Agent can change their chairperson password and select the option of whether the conference ends automatically when they disconnect. Refer to the *Personal Agent User Guide* for more information about Meet Me audio conference preferences. See your system administrator for information about Meet Me audio conferencing on your system.

Getting to know the i2002 Internet Telephone

i2002 Internet Telephone buttons

Your i2002 Internet Telephone includes buttons that provide instant access to features of the set. The following picture shows the buttons available on your i2002 Internet Telephone:

Using the i2002 Internet Telephone quick buttons

The i2002 Internet Telephone quick buttons provide pre-programmed service access with a touch of a button. The quick buttons are located under the navigation buttons on your i2002 Internet Telephone.

During certain operations (such as receiving an incoming call) the quick buttons will remain disabled. In some situations (such as programming a Forward to Destination), the address book, inbox and outbox quick buttons may be used to select and/or switch between the lists as applicable. [Table 1](#) lists the i2002 Internet Telephone quick buttons and functions.

Table 1 i2002 quick buttons

Pressing this quick button...	Activates this function and softkeys...
Address book 	Access to a network-based address book. Press <ul style="list-style-type: none"> • Call - to place a call to the entry that appears on the display • Add - to add an entry in the list • Modify - to edit or delete the entry • Ok - to return to the idle display If there are multiple users on the phone, you will first be presented with a list of address books and the following softkeys <ul style="list-style-type: none"> • Select - to display the address book • Cancel - to return to the idle display For more information see “Managing your address book” on page 65.
Inbox 	Displays a log of calls received. Press <ul style="list-style-type: none"> • Call - to place a call to the entry that appears on the display • All/Missed - toggles between the list of all calls and those you missed • Delete - to remove the entry from the list • Ok - to return to the previous screen (list of Inboxes or idle display) If there are multiple users on the phone, you will first be presented with a list of inboxes and the following softkeys <ul style="list-style-type: none"> • Select - to display the missed calls for the inbox • Cancel - to return to the idle display For more information see “Using the inbox options” on page 62.
Outbox 	Displays a log of the most recent calls you made. Press <ul style="list-style-type: none"> • Call - to dial the entry • Delete - to remove an entry • Ok - to return to the previous menu If there are multiple users on the phone, you will first be presented with a list of outboxes and the following softkeys <ul style="list-style-type: none"> • Select - to display the missed calls for the outbox • Cancel - to return to the idle display For more information see “Managing your outbox” on page 66.
Quick Services 	Access to Presence, Global Search, Stock Query, Send IM, Do Not Disturb and Retrieve Parked Call. Press <ul style="list-style-type: none"> • Select - to select the entry • Cancel - to return to the idle display For more information about these features see “Advanced features and services” on page 69.

Table 1 i2002 quick buttons

Pressing this quick button...	Activates this function and softkeys...
Switch Server 	Allows you to select an alternate server. A display prompts "Use Alternate Server?" and displays the IP and Port of the alternate server. Press <ul style="list-style-type: none">• Ok - to have your i2002 Internet Telephone attempt to connect to the alternate server listed in the display• Cancel - to return to the idle display
Quit 	Allows you to cancel a feature or function.

The i2002 Internet Telephone display

The i2002 Internet Telephone display is organized as follows:

The main display, when idle, shows the day and time, as well as any bulletins sent by your service provider. The display changes to show call activity (such as, who is calling), feature activation and menu options.

The line information area of the display shows:

- who is logged in to the telephone and what line they are assigned. The first person to log in is assigned the primary line.
- line status icons that change according to call activity. For more information about icons see [“Recognizing common i2002 Internet Telephone icons.” on page 25.](#)
-  if there is more information to display (use navigation buttons to view)

The softkey area of the display shows the labels for the corresponding telephone buttons below. The softkey labels change according to the telephone activity. From the idle display you can access the View, Services and Config menus as well as activate the Srch (Global Search) feature.

Entering alphanumeric characters

You can make a call by dialing a telephone number or by dialing a person's alphanumeric address (for example, jdoe2@domain.com). Alphanumeric dialing refers to the spelling of names or words by dialing alphabetic characters co-located with the numbers on the numeric dialpad of your i2002 Internet Telephone.

For example, the 6 button on your numeric dialpad represents the letters "m," "n," and "o". You can cycle through the letters (and finally the actual number) by repeatedly pressing the number button. Names or words that have two adjacent letters that require the same button, such as in the name "nortel", are entered by entering the first character, briefly pausing, and entering the next letter.

To practice using alphanumeric dialing, follow the steps in this table to spell the word "nortel".

Step	Action	Result
1.	Go off-hook, press the Alpha softkey, and press the 6 (MNO) button twice on the dial pad.	The first time the 6 button is pressed, "m" appears on the display. The second time the 6 button is pressed the letter "n" appears on the display.
2.	Pause for one second and press the 6 button three times.	The letter "o" appears on the display.
3.	Press the 7 button three times.	The letter "r" appears on the display.

Step	Action	Result
4.	Press the 8 button.	The letter "t" appears on the display.
5.	Press the 3 button twice.	The letter "e" appears on the display.
6.	Press the 5 button three times.	The letter "l" appears on the display.

 **Note:** Your i2002 Internet Telephone may already default to alphanumeric dialing. If you see the **NoAlph** softkey then you are already in alphanumeric dialing mode.

 **Tip:** To enter an uppercase letter, press the up navigation button following the entered letter. To change to lowercase press the down navigation button following the entered letter. The back navigation button erases the last character. To enter a space, press the right navigation button.

In alphanumeric dialing, the **1** dialpad button represents the following characters:

Character	Name
@	at
*	star (used as wildcard symbol in global searches)
.	period
-	dash
_	underscore
&	ampersand
'	apostrophe
^	carat
?	question mark
!	exclamation point
(left parenthesis

Character	Name
)	right parenthesis
,	comma
1	numeral 1

Note: To enable or disable the alphanumeric dialing option see [“Setting preferences” on page 31](#).

Searching for addresses

You can easily search through the addresses in your inbox, outbox and personal address book. How you search depends on the method that you set in your configuration preferences (see [“Setting search method” on page 32](#)).

Index	Enter the number associated with the entry.
1st Character Search	Enter the first character of the entry.
Name Search	Enter all of the characters of an entry name.

Note: For information on searching the global address book refer to [“Global Search” on page 76](#).

The default search method for the i2002 Internet Telephone is 1st Character Search.

To search for an address

- 1 Press a quick button to access your inbox, outbox or address book. (In this example we use the address book.)

- 2 Press the dialpad button for the first letter (or character) in the address you are looking for. For example, to search for jdoe in your address book, you would press the 5 dialpad button once for the letter j.

All of the entries that begin with the letter j are accessible to scroll through with the down navigation button. Use the available softkeys to **Call** this entry, **Add** a new entry, **Delete** an entry, **Modify** the entry or press **Ok** to return to the idle display.

Helpful hints

When navigating the i2002 Internet Telephone menus or entering text, keep the following tips in mind:

- In a numbered menu list press the dialpad number that corresponds to the item on the list to select it.
- Use the navigation buttons to scroll vertically and horizontally through display information.
- Use the * dialpad button to return to the beginning of a list and the # button to go to the end of a list.
- To capitalize a letter, first enter the letter using the dialpad and then press the up navigation button to apply capitalization.

Recognizing common i2002 Internet Telephone icons.

The i2002 Internet Telephone displays various icons to indicate call and feature status. The following table presents some of the more common icons that you will see on the display.

Icon	Meaning
	telephone line is idle
	shows when a call feature is activated (for example, call forward and DND). The display text changes periodically to alert you that a feature is active (DND Active or FWD Active). when blinking, indicates a problem with the network (try to log in again or contact your network administrator)
	ringing call
	if this icon displays beside a line button the telephone is off-hook if this icon displays in the inbox then it indicates a call that you answered
	another active call
	active call has been put on hold
	line button is programmed for a feature such as, speed dial, send IM, do not disturb, call forward, stock query and change presence status

Chapter 3

Configuring the i2002 Internet Telephone

This section describes the settings that you can customize on your i2002 Internet Telephone. The Configuration menu of the i2002 Internet Telephone includes the following options:

#	Config menu option
1	Volume setting
2	Contrast Setting
3	Preferences
4	Location
5	Language Preference
6	Time Preferences
7	Display Version
8	Reset Phone
9	Switch Controller

Tip: For quick selection, press the number on the dialpad that corresponds to the menu item. Use the up and down navigation buttons to scroll through the Configuration menu list. The * button takes you to the beginning of a list and the # button takes you to the end of a list.

Note: Some menu options allow you to configure or view parameters that are specific to a line. If there are multiple users logged in to the telephone then you are prompted to select your line button.

Adjusting volume settings

The volume settings sub-menu offers the following options:

- 1 Ring Pattern
- 2 Handset Volume
- 3 Headset Volume
- 4 Handsfree Volume
- 5 Alerting Volume

Tip: You can adjust the handset, headset, handsfree and alerting volume when a call is ringing or, while on an active call using the volume control bar located below the dialpad. The new volume setting becomes the default for the telephone.

Note: You must press the **Save** softkey at the volume settings sub-menu after you have made your changes in order to apply your new volume settings.

Adjusting ring pattern

The i2002 Internet Telephone offers you several different ring patterns. You can select a ring pattern that is different from your co-workers to easily distinguish when your telephone is ringing.

To change your ring pattern

- 1 Press the **Config** softkey.
- 2 Choose the **Volume Setting** option, and press the **Select** softkey.
- 3 Choose the **Ring Pattern** option, and press the **Select** softkey.
- 4 Use the up and down navigation buttons to scroll through the different ring pattern options. The speaker plays the ring pattern.
- 5 Press **Ok** at the ring pattern of your choice.

- 6 Select another volume setting to change or, press **Save** to apply the change you have just made. (Press **Cancel** to return to the idle display and your changes will not be applied.)

Adjusting handset volume

You can raise and lower the volume setting for the handset. From the idle display

- 1 Press the **Config** softkey.
- 2 Choose the **Volume Setting** option, and press the **Select** softkey.
- 3 Choose the **Handset Volume** option, and press the **Select** softkey.
- 4 Use the right and left navigation buttons to increase and decrease the volume. A shaded bar graph indicates the volume level.
- 5 Press **Ok**.
- 6 Select another volume setting to change or, press **Save** to apply the change you have just made. (Press **Cancel** to return to the idle display and your changes will not be applied.)

Adjusting headset volume

You can raise and lower the volume setting for the headset. From the idle display

- 1 Press the **Config** softkey.
- 2 Choose the **Volume Setting** option, and press the **Select** softkey.
- 3 Choose the **Headset Volume** option, and press the **Select** softkey.
- 4 Use the right and left navigation buttons to increase and decrease the volume. A shaded bar graph indicates the volume level.
- 5 Press **Ok**.
- 6 Select another volume setting to change or, press **Save** to apply the change you have just made. (Press **Cancel** to return to the idle display and your changes will not be applied.)

Adjusting handsfree volume

You can raise and lower the volume setting for the handsfree button. From the idle display

- 1 Press the **Config** softkey.
- 2 Choose the **Volume Setting** option, and press the **Select** softkey.
- 3 Choose the **Handsfree Volume** option, and press the **Select** softkey.
- 4 Use the right and left navigation buttons to increase and decrease the volume. A shaded bar graph indicates the volume level.
- 5 Press **Ok**.
- 6 Select another volume setting to change or, press **Save** to apply the change you have just made. (Press **Cancel** to return to the idle display and your changes will not be applied.)

Adjusting alerting volume

You can raise and lower the ringing volume setting for incoming calls. From the idle display

- 1 Press the **Config** softkey.
- 2 Choose the **Volume Setting** option, and press the **Select** softkey.
- 3 Choose the **Alerting Volume** option, and press the **Select** softkey.
- 4 Use the right and left navigation buttons to increase and decrease the volume. The speaker plays the ring volume that corresponds to the setting you choose.
- 5 Press **Ok**.
- 6 Select another volume setting to change or, press **Save** to apply the change you have just made. (Press **Cancel** to return to the idle display and your changes will not be applied.)

Adjusting contrast setting

To set how light or dark the characters appear on your LCD display

- 1 Press the **Config** softkey.
- 2 Choose the **Contrast Setting** option, and press the **Select** softkey.
- 3 Use the left and right navigation buttons to make the display lighter or darker.
- 4 Press the **Ok** softkey when you are satisfied with the contrast or, the **Cancel** softkey to cancel any changes to the display.

Setting preferences

The preferences sub-menu offers the following options:

- Alpha Dialing - set the default dialing mode
- IM Display - block instant messages from appearing on the display
- Search Method - select an index, 1st character or, name search mechanism
- Ignore Action - choose a setting for the Ignore softkey
- Dialpad - select the character set that corresponds to your language

Setting alpha-numeric dialing

You can set the telephone dialpad to default to alphanumeric dialing or to dial only numbers. To change the alphanumeric dialing default

- 1 Press the **Config** softkey.
- 2 Choose the **Preferences** option, and press the **Select** softkey.
- 3 Choose the **Alpha Dialing** option, and press the **Change** softkey.
- 4 Press the **Ok** softkey to change the Alphanumeric dialing option or, press the **Cancel** softkey to exit.

Note: For more information about using alphanumeric dialing see [“Entering alphanumeric characters” on page 21.](#)

Setting IM display

You can choose to block all incoming instant messages so that the text does not appear on the telephone display. The default setting is ON. To change the IM display setting

- 1 Press the **Config** softkey.
- 2 Choose the **Preferences** option, and press the **Select** softkey.
- 3 Choose the **IM Display** option, and press the **Change** softkey.
- 4 Press the **Ok** softkey to change the IM Display option or, press the **Cancel** softkey to exit.

Setting search method

You can select the method to search for entries in your address book, inbox and, outbox. The choices are as follows:

Index	Enter the number associated with the entry.
1st Character Search	Enter the first character of the entry.
Name Search	Enter all of the characters of an entry name.

- 1 Press the **Config** softkey.
- 2 Choose the **Preferences** option, and press the **Select** softkey.
- 3 Choose the **Search Method** option, and press the **Change** softkey.
- 4 Select a search method from the list.
- 5 Press the **Ok** softkey to change the search option or, press the **Cancel** softkey to exit.

Tip: For information on how to use the search function refer to [“Searching for addresses” on page 43](#).

Setting ignore action

You can set the actions of the **Ignore** softkey. The **Local** setting stops an incoming call from ringing on your i2002 Internet Telephone, any other devices defined in your ring list continue to ring for the duration of the ring list before advancing to the next ring list. The **Network** setting stops the incoming call from ringing on all devices defined in your ring list and forwards the call to the next ring list (if defined). For example, you may set up your ring list sequence to go to your voice mail account.

Tip: For more information about creating a ring list refer to the *Personal Agent User Guide*.

- 1 Press the **Config** softkey.
- 2 Choose the **Preferences** option, and press the **Select** softkey.
- 3 Choose the **Ignore Action** option, and press the **Change** softkey.
- 4 Press the **Ok** softkey to change the Ignore Action option or, press the **Cancel** softkey to exit.

Setting dialpad

You can change the dialpad character setting reflect the alphanumeric character set of your language. To change the dialpad character set

- 1 Press the **Config** softkey.
- 2 Choose the **Preferences** option, and press the **Select** softkey.
- 3 Choose the **Dialpad** option and press the **Change** softkey.
- 4 Use the up and down navigation buttons to scroll through the options.
- 5 Choose your dialpad character set and press the **Ok** softkey or, press the **Cancel** softkey to exit.

Specifying location

You have the ability to access the system from different locations. For example, you may move to another building or temporarily log into someone else's i2004 Internet Telephone. At login, the system prompts you to select your location (from a pre-defined list) in order that emergency services may be correctly routed if needed. You can also initiate a change to your location through the Config menu.

To change your location information

- 1 Press the **Config** softkey.
- 2 Use the up and down navigation buttons to choose the **Location** option, and press the **Select** softkey.

If you select **Other**, a warning message appears "Warning: A location was selected that may affect your emergency services. Display this warning in the future?". Select **Yes** or **No**. If you select Yes then you will be prompted with this warning every time you log in or when your telephone or server resets. If you select No then you will not see this warning again.

Note: If you choose Other as your location and you dial an emergency number, there may be delays in locating you.

- 3 Press the **Ok** softkey or, Cancel to return to the idle display.

You may be prompted to select a sub-location as well. Follow the prompts to continue. The **Back** softkey returns you to the previous display.

Setting language preferences

You can select the language that displays on your i2004 Internet Telephone.

- 1 Press the **Config** softkey.
- 2 Choose the **Language Preferences** option, and press the **Select** softkey. The display shows the current language.
- 3 Press **Change** and use the up and down navigation buttons to scroll through the language options.

- 4 Choose your language option, and press the **Select** softkey or, Cancel to return to the idle display.

Setting time preferences

You can choose how the date and time displays on your telephone screen and set your time zone.

Date Format: MM/DD			▼
Date	TZone	Time	Ok

Tip: Use the left and right navigation buttons to horizontally scroll the text.

Changing date format

To choose whether the date format displays as month/day or day/month

- 1 Press the **Config** softkey.
- 2 Choose the **Time Preferences** option, and press the **Select** softkey. The screen displays the current Time Preferences settings.
- 3 Press the **Date** softkey. A list of date format choices displays. Use the up and down navigation buttons to scroll through the list.
- 4 Choose the date format you want, and press the **Select** softkey.
- 5 Press **Ok** to exit or choose another Time Preferences option.

Changing time zone

To specify your time zone

- 1 Press the **Config** softkey.
- 2 Choose the **Time Preferences** option, and press the **Select** softkey. The screen displays the current Time Preferences settings.

- 3 Press the **TZone** softkey. A list of time zone choices displays. Use the up and down navigation buttons to scroll through the list.
- 4 Choose the time zone format you want, and press the **Select** softkey.
- 5 Press **Ok** to exit or choose another Time Preferences option.

Tip: Use the left and right navigation buttons to horizontally scroll the time zone descriptions.

Changing time format

To specify how the clock will display time

- 1 Press the **Config** softkey.
- 2 Choose the **Time Preferences** option, and press the **Select** softkey. The screen displays the current Time Preferences settings.
- 3 Press the **Time** softkey. A list of time format choices displays. Use the up and down navigation buttons to scroll through the list.
- 4 Choose the time format you want, and press the **Select** softkey.
- 5 Press **Ok** to exit or, choose another Time Preferences option.

Displaying i2002 Internet Telephone information

To view technical information about the telephone and system

- 1 Press the **Config** softkey.
- 2 Choose the **Display Version** option and press the **Select** softkey. The screen displays: the system release, build and date, IPCM IP address and port, firmware version, MAC address, IP address of the i2002 and terminal ID, domain, and location.
- 3 Use the navigation buttons to scroll through the information on the screen.
- 4 Press the **FirmW** softkey for a prompt to upgrade the firmware to the latest available load or, **Cancel** to return to the idle display.

Resetting your i2002 Internet Telephone

To reset your phone to reconnect to the server

- 1 Press the **Config** softkey.
- 2 Choose the **Reset Phone** option, and press the **Select** softkey.
- 3 Press the **Ok** softkey to confirm the reset or, cancel to return to the idle display.

Switching server control

If you lost the connection to your server, your i2002 Internet Telephone will automatically switch to the secondary server. You can also manually switch to the secondary server.

To manually change the proxy server that controls your i2002 Internet Telephone

- 1 Press the **Config** softkey.
- 2 Choose the **Switch Controller** option and press the **Select** softkey.
- 3 At the display prompt, confirm the IP address and port number of the alternate server.
- 4 Press the **Ok** softkey. The control of the phone switches to the new server.

Tip: As a shortcut you can use the

quick button to change servers.

Chapter 4

Making calls

This section describes the various ways that you can place and receive calls on your i2002 Internet Telephone. Topics include:

- [Getting started with your i2002 Internet Telephone](#)
- [Placing a call](#)
- [Entering an address](#)
- [Answering an incoming call](#)
- [Receiving a second call](#)
- [Ending a call](#)
- [Placing a conference call](#)
- [Placing a call on hold](#)
- [Parking a call](#)
- [Incoming call options](#)
- [Sending and receiving instant messages](#)

Getting started with your i2002 Internet Telephone

The following table lists the steps for some of the functions you will use on an everyday basis.

To...	Do this...
Place a call	<ol style="list-style-type: none"> 1. Pick up your handset or press the Handsfree button to go off hook on the primary line (the green line button). 2. Dial a phone number or enter an alphanumeric address. See “Entering an address” on page 42. 3. Either wait briefly for the phone to place the call automatically, or press the Send softkey. 4. Hang up the handset or press the button to disconnect from the call.  <p>To place a call to an entry in your inbox, outbox, address book or list of friends, see Chapter 5, “Managing your calls,” on page 57.</p>
Place a conference call	<ol style="list-style-type: none"> 1. After initiating or receiving a call, press the Call softkey to invite an additional party to the conversation. 2. Dial a phone number or enter an address. You will hear the second number ring. 3. Wait for an answer, then press the Join softkey. 4. Hang up the handset or press the Goodbye softkey to disconnect from the conference.
Check a stock quote	<ol style="list-style-type: none"> 1. Select the Servcs softkey. 2. Use the navigation buttons to select the Stock Query feature from the display area. 3. Use the dialpad to enter the symbol of the stock you wish to query. If you make a mistake, re-enter the symbol and the previous entry is deleted. 4. Select the Query softkey to initiate your query. Once the query is complete, the quote appears on the display.

Softkey dialing options

When you go off-hook to make a call the idle display changes:

Press	To ...
VMail	Dial your voice mailbox (if configured).
Rdial	Dial the last number you called.
Alpha/NoAlph	Activate alphanumeric dialpad characters.
Sbjct	To select a call subject to add to you call.

Note: The **Rdial** softkey does not appear on the display until after you have made your first call.

Placing a call

You can make calls with your i2002 Internet Telephone in any of the following ways:

To make a call with the...	Do this...
Handsfree button	Press the Handsfree button to go off-hook on the primary line (the green line button) and produce a dial tone.
Line button	Press any available line button to produce a dial tone. An available line has a user name label next to it.

To make a call with the...	Do this...
Handset	Pick up the handset.
Headset button 	Press this button to go off-hook on the primary line (the green line button) and produce a dial tone.

Tip: Press  to disconnect from the call at any time.

Entering an address

To make a call you can dial a number (numeric address such as, 555-1212) or an alphanumeric SIP address (jdoe2@domain.com).

To enter an address using the dialpad

- 1 Dial the number using the dialpad. When dialing, the left navigation button acts as a backspace button.
- 2 When you finish dialing the number, the phone automatically places the call if nothing has been entered for a short time. You can expedite the dialing by pressing the **Send** softkey.

To enter an address using alphanumeric dialing

- 1 Once off-hook, press the **Alpha** softkey to begin dialing.
- 2 After entering the name or word, press the **Send** softkey, or wait for the phone to place the call.

Note: For more information about alphanumeric dialing see [“Entering alphanumeric characters” on page 21](#) and [“Setting preferences” on page 31](#). If the **NoAlph** softkey appears on your display then alphanumeric dialing is already enabled.

Searching for addresses

To make a call, you can choose an entry from your address book, inbox, or outbox. To quickly locate the entry you are looking for you can do a search. The method you use to search for entries depends on what is configured in your preferences. Refer to [“Setting search method” on page 32](#). The three search methods are

Search method	Do this
Index	Enter the number of the entry item just as you would to select a menu option.
1st Character Search	Enter the first character of the entry name. For example, press 4 on the dialpad to search for entries beginning with the letter G. Press 4 twice to search for entries beginning with the letter H.
Name Search	Enter all of the characters in a name. This option is useful if you have large lists of entries.

Global search

From the idle display of your telephone you can search the global address book and initiate calls.

- 1 Press the **Srch** softkey on the idle display of your i2002 Internet Telephone.
- 2 Highlight the field that you want to search as follows:

1. User Name
2. Name
3. Last Name
4. First Name
5. Phone Number

- 3 Press **Select**.

- 4 Enter your search parameter. Use the dialpad and the Alph/NoAlph softkey to enter alpha and numeric characters

Tip: To enter a wildcard symbol, press the * button on the dialpad.

- 5 Press **Ok**. The display shows the results of your search. Press **Call** to initiate a call or **Save** to add this entry to your personal address book.

Tip: You can also access the search capability through the Services menu. Refer to [“Global Search” on page 76](#) for more details.

Adding subjects to a call

You can send a line of text to the person you are calling to let them know why you are calling. The subject text appears on the display of the person you are calling. This procedure assumes that you have defined a list of call subjects. For information on how to create or change subject text see [“Adding call subjects” on page 61](#).

To add a subject (pre-defined) to an outgoing call

- 1 While making a call, press the **Sbjet** softkey and use the navigation buttons to choose the desired subject.
- 2 Press the **Select** softkey. The subject text will appear on the screen of the person you are calling (if their device supports this feature).

Tip: If you have access to the Personal Agent then you can quickly customize your list of subjects. For more information refer to the *Personal Agent User Guide*.

Answering an incoming call

When an incoming call is ringing the following options are available:

Press	To ...
Answer	Answer the call with handsfree or pick up the handset.
Redrct	Send the call to another destination.
Dcline	Stop the call from ringing (cancel).
Ignre	Stop the call from ringing and handle it through a ring list.

See [“Incoming call options” on page 53](#) for more information.

Note: For information on how to set up ring lists refer to the *Personal Agent User Guide*.

Active call actions

After you have answered a call, the following options are available:

Press	To ...
Trnsfr	Transfer the call to another party.
Audio	Display details about the current codec setting and change your codec. See “Changing audio settings” on page 81 for more information.
Call	Initiate new outgoing calls.
Park	Places the call on hold on the system so that another person can retrieve it. See “Parking a call” on page 50 for more information.

Receiving a second call

If you are on an active call and someone else tries to call you on the same line, the the i2002 Internet Telephone alerts you with an audible beep and the ringing call information appears on the display. For example:

- 1 While mjane and jdoe are talking, jdoe receives an incoming call from csmith.
- 2 An audible beep alerts jdoe of the incoming call from csmith.
- 3 The information about the call with mjane no longer appears on the screen.
- 4 The caller ID for csmith displays and a ringing icon appears next to csmith.

- 5 The softkeys along the bottom of the screen also change. The softkeys apply to csmith's call.

- 6 Jdoe can use the softkeys to **Answer**, **Redrct**, **Dcline**, or **Ignre** the call from csmith while continuing to talk to mjane.
- 7 To answer the incoming call with csmith, jdoe presses the line button next to jdoe's name, or presses the **Answer** softkey, while csmith's caller ID information appears on the display. The first call (between mjane and jdoe) is placed on hold.

Tip: When an incoming call is ringing, you must deal with it or wait for it to stop ringing before the softkeys return for your active first call.

- 8 The new call between csmith and jdoe becomes active.
- 9 When the second call is answered, the display changes to reflect these new states. The display icons indicate the state of the calls. Use the navigation buttons to move between the active call and the call on hold. The softkeys change and apply to the call that appears on the display, which is now csmith.

Switching between active calls on the same line

To switch between calls that are on the same line

- 1 Use the navigation buttons to display the inactive call.

- 2 Press the line button associated with the call or, press the **Switch** softkey to switch calls.

The following example describes how to switch between calls on the same line:

- 1 Jdoe uses the navigation buttons to display the inactive call with mjane.

- 2 Jdoe presses the **Switch** softkey or the line button next to jdoe's name on the screen. The call between csmith and jdoe is put on hold.
- 3 Once again, the call between mjane and jdoe becomes active, and mjane's line information remains on the display.

- 4 Choose csmith's call and press the **Switch** softkey to place mjane on hold and switch the call back to csmith.

Tip: Switching between calls works for both incoming and outgoing calls.

Ending a call

To end an active call, press the **Goodbye** button or put the handset on the receiver.

In the following example, jdoe is conversing with mjane. mjane's caller ID appears on the display. To end this active call

- 1 Jdoe presses the **Goodbye** button or puts the handset on the receiver. The call is released between jdoe and mjane. The call between jdoe and csmith is left on hold. The information about the call between jdoe and csmith still displays.
- 2 Jdoe presses the **Hold** softkey to resume the conversation with csmith.

Placing a conference call

The i2002 Internet Telephone allows you to connect calls together to form a conference.

While on a call, you can initiate a conference call to connect new parties to the call.

To place a conference call using the **Call** softkey

- 1 Press the **Call** softkey. Your current call is automatically put on hold.
- 2 Enter the new address.
- 3 Press the **Send** softkey. The new address begins to ring. Once the new party answers the call, the display changes. You can speak to the newly called party and the original called party is still on hold.
- 4 When the party answers, press the **Join** softkey to connect the calls.

To place a conference call to entries in your inbox, outbox or address book, while on a call

- 1 Press the **Call** softkey. Your current call is automatically put on hold.
- 2 Press an inbox, outbox or address book quick button.
- 3 Choose an entry.
- 4 Press the **Select** softkey. The new address begins to ring. Once the new party answers the call, the display changes. You can speak to the newly called party and the original called party is still on hold.

- 5 To complete the conference call, press the **Join** softkey.

Tip: Any party, including the originator of the conference call, may hang up and the remaining callers on a conference call will still be connected.

Placing a call on hold

To place a call on hold

- 1 Press the **Hold** button to place the other party on hold. The  icon beside the line button flashes.
- 2 Press the **Hold** button a second time, or press the line button associated with the call on hold to resume the conversation

Parking a call

You can park an active call so that another user can retrieve it. A call can either be parked and assigned a call ID for general retrieval or it can be parked for a specific user. Refer to [“Retrieve parked call” on page 75](#), for instructions on entering a call ID to retrieve a parked call. If a call is parked for you specifically, then a message displays on your telephone with softkeys to **Retrieve**, **Ignore** or make a new **Call**.

Tip: This feature must be enabled in your service package. Contact your system administrator for more details.

To park an active call for general retrieval

- 1 Press the **Park** softkey.
- 2 Press the **Park** softkey again. The display shows the parked call and the call ID number to retrieve it.

- 3 Communicate the call ID number to the person that needs to retrieve the call. If the call is not retrieved then it rings back on your telephone.

Tip: Through the Personal Agent (if applicable), you can configure the amount of time a call is parked before it rings back to you. Refer to the *Personal Agent User Guide* for more information.

To park an active call for a specific user

- 1 Press the **Park** softkey.
- 2 Press the **User** softkey.
- 3 Enter the name or address of the person who needs to retrieve this call and press the **Ok** softkey. The user you designate to retrieve this parked call receives a message on their display. If the call is not retrieved then it rings back on your telephone.

Tip: If you wanted to take a call from another device, or move to a private office, you can park a call against yourself. In this case, the parked call will not ring back to you if you don't pick it up within the specified time.

Transferring a call

You can transfer a call without speaking to the person you are transferring to (blind transfer), or you can consult with the party prior to completing the transfer.

Call transfer

While on a call, you can transfer a call to another party without waiting for that party to answer. The originating, or terminating party can initiate the transfer, but is no longer involved in the call upon completing the transfer.

To transfer a call

- 1 Press the **Trnsfr** softkey.

- 2 Enter the address where you want to transfer this call, or press the quick buttons to access and select an entry from the inbox, outbox or address book.
- 3 Press the **Trnsfr** softkey. The display prompts you to select whether or not you want to consult with the called party.
- 4 Press the **No** softkey to complete the transfer without consulting with the party you are calling. The original called party is put on hold. The display confirms if the transfer is complete or fails.
- 5 Press the **Ok** softkey to return to an idle display or, if the transfer failed, press the line key to reconnect the call.

Call transfer with consult

While on a call, you can call another address, speak with the person at the new address, and then transfer the original call to the new address.

To transfer with consult

- 1 Press the **Trnsfr** softkey.
- 2 Enter the address where you want to transfer this call, or press the quick buttons to access and select an entry from the inbox, outbox or address book.
- 3 Press the **Trnsfr** softkey. The display prompts you to select whether or not you want to consult with the called party.
- 4 Press the **Yes** softkey to consult with the party you are calling. The original called party is put on hold. The call to the new address rings.
- 5 Consult with the party you wish to transfer the first call to. Press the **Trnsfr** softkey to complete the transfer, or **Cancel** to disconnect and return to the original call. The display confirms if the transfer is complete or fails.
- 6 Press the **Ok** softkey to return to an idle display, or if the transfer failed, press the line key to reconnect the original call.

Incoming call options

The following softkey options are available for incoming ringing calls:

Press	To do this ..
Answer	Answer the call.
Redrct	Redirect the call to another address.
DcIne	Stop the call from ringing (does not advance to the next ring list). The call is cancelled and a message is sent to the caller. Note: Decline stops a call from ringing on all devices defined in your ring list.
Ignre	Stop the call from ringing on your i2004 Internet Telephone (call handling depends on the feature settings). The call is then handled by your ring list. For more information about Ignore feature settings see “Setting ignore action” on page 35 .

Redirecting a call

To redirect an incoming call to another location without answering the call

- 1 Press the **Redrct** softkey.
- 2 Use the dialpad to enter the new address.
- 3 Press the **Redrct** softkey to add the new party.

To redirect an incoming call using the outbox or address book

- 1 Press the **Redrct** softkey.
- 2 Press an outbox or address book quick button.
- 3 Choose the entry you wish to redirect to and press the **Select** softkey.
- 4 Press the **Redrct** softkey.

Declining a call

When you decline an incoming call it stops ringing on your telephone. The caller receives a decline message and a busy signal. You can also decline a call and specify a reason if you have configured reject reasons through the View menu.

To decline an incoming call without a reason

- 1 Press the **Dclne** softkey.
- 2 Press the **Ok** softkey to decline the call. The calling party receives a busy signal, or press the **Cancel** softkey to cancel the decline. The original ringing display appears.

To decline an incoming call with a reason

- 1 Press the **Dclne** softkey.
- 2 Press the **Reason** softkey. The list of predefined reasons displays.

Note: If there are no reject reasons defined then the Reason softkey will not appear on the display.

- 3 Choose a reason and press the **Select** softkey.
- 4 Press the **Ok** softkey to decline the call. The calling party receives a busy signal and the reject reason appears on their display.

Or press the **Cancel** softkey to cancel the decline. The original ringing display appears.

Tip: For information about creating or changing a list of Reject Reasons see [“Adding reject reasons” on page 61](#). For information about setting the i2004 Internet Telephone to automatically decline all calls see [“Do Not Disturb \(DND\)” on page 74](#).

Ignoring a call

You can stop an incoming call from ringing (see [“Setting ignore action” on page 33](#) for an explanation of options) and have your ring list route your call.

To ignore an incoming ringing call

- 1 Press the **Ignore** softkey.
- 2 Press the **Ok** softkey to pass the call. The call is handled by your ring list. When the ring list is exhausted, the caller receives a busy signal.

Or press the **Cancel** softkey to cancel the ignore process. The original ringing display appears.

Tip: For more information about creating a ring list refer to the *Personal Agent User Guide*.

Sending and receiving instant messages

Your i2002 Internet Telephone beeps to alert you when you receive a new instant message (IM) and shows the message on the display.

To send an instant message press the

quick button and select the **Send IM** option.

Tip: For more information about instant messages see [“Instant messaging” on page 71](#).

Chapter 5

Managing your calls

This section describes how to manage your calls efficiently using both the i2002 Internet Telephone quick buttons and more advanced features in the View menu.

The View menu option provides you with the following options:

#	View menu option
1	Friends
2	Presence
3	Call Subject
4	Reject Reason
5	Line Information
6	Inbox
7	Address Book
8	Outbox

Tip: For quick selection, press the number on the dialpad that corresponds to the menu item. Use the up and down navigation buttons to scroll through the View menu list. The * button takes you to the beginning of a list and the # button takes you to the end of a list.

Note: Some menu options allow you to configure or view parameters that are specific to a line. If there are multiple users logged in to the telephone then you will be prompted to select your line button.

Some of these items can also be accessed using the quick buttons.

Address book

Inbox

Outbox

Accessing the list of friends

You can maintain a list of users on your system that you frequently contact, using the Personal Agent (if available). Through the View menu on your i2002 Internet Telephone you can see who, in your list of friends, is connected or unavailable.

To access the list of friends

- 1 Press the **View** softkey.
- 2 Choose the **Friends** option and press the **Select** softkey to access your list of friends. Your personalized list of friends appears on the display.
- 3 Use the up and down navigation buttons to scroll through the list. Use the right navigation button to view the presence details for this entry.

You have the option to **IM**, or **Call** the entry you highlight.

Tip: For more information about creating a list of friends refer to the *Personal Agent User Guide*.

Changing your presence status

The presence option allows you to alert other users on the system to your online status. Users that have you listed as one of their friends can see if you are connected or unavailable. You can also customize your own presence option (see [page 59](#)).

Tip: If your presence status is Unavailable and you log off (or the system resets), then you will be prompted to change your status when you log in again.

To change your online status or presence

- 1 Press the **View** softkey.
- 2 Choose the **Presence** option and press the **Select** softkey. Your current presence status appears on the display.
- 3 Press the **Change** softkey. Use the up and down navigation buttons to choose either the **Connected** or **Unavailable** option.

Tip: If you select **Unavailable - Busy** as your status then calls will not ring on your telephone. Incoming calls are either handled by the Make Subscriber Busy (MSB) route (through the Personal Agent, if applicable) or they are treated the same way as the Ignore feature. This feature is service package dependent.

- 4 Press the **Select** softkey.
- 5 Choose a presence option and press the **Select** softkey. The display shows your new presence status and prompts you to confirm.
- 6 Press the **Ok** softkey to confirm. Entering your own presence option.

Customizing presence options

You can add up to four customized presence options to either the Connected or Unavailable options list. The text for a customized presence option can be up to 32 characters in length. To add an option to a list

- 1 Press the **View** softkey.
- 2 Choose the **Presence** option and press the **Select** softkey. Your current presence status appears on the display.
- 3 Press the **Change** softkey. Use the up and down navigation buttons to choose either the **Connected** or **Unavailable** option lists.
- 4 Press the **Select** softkey. Use the up and down navigation buttons to scroll through the current list.

- 5 Press the **Add** softkey.

- 6 Enter a text label for your presence option using the dialpad (for example, "in a conference"). Press the **Ok** softkey. The display prompts you select this new presence option as the current default.

- 7 Press the **Ok** softkey to confirm or, press **Cancel** to return to the View menu. (If you press **Cancel**, the new menu option still appears in the list although you did not choose it as your current default.)

Tip: To automatically change your presence status with the press of a key refer to [“Program Key” on page 77](#) for more information.

Adding call subjects

You can create a handy list of call subjects to let the person you are calling know the nature of your call. The subject text can be up to 100 characters in length however recipients may need to scroll to see long messages.

To create subjects for outgoing calls

- 1 Press the **View** softkey.
- 2 Choose the **Call Subject** option and press the **Select** softkey.
- 3 Press the **Add** softkey. (If this is your first call subject then you can begin to enter the text immediately, without pressing Add.)
- 4 Enter the subject text.
- 5 Press the **Ok** softkey.

Tip: You can choose an existing Subject entry and press the **Modify** softkey to edit the text, or use the **Del** softkey to remove an entry from the list.

Note: For information on how to use this feature refer to [“Adding subjects to a call”](#) on page 44.

Adding reject reasons

When you are unable to answer a call you can send a message telling the caller why you cannot answer. The reject reason text can be up to 40 characters in length however you must scroll to see messages longer than 24 characters.

To create call reject reasons

- 1 Press the **View** softkey.
- 2 Choose the **Reject Reasons** option and press the **Select** softkey.
- 3 Press the **Add** softkey and enter the desired text.

- 4 Press the **Ok** softkey.

Tip: You can choose an existing reject reason entry and press the **Modify** softkey to edit the text, or use the **Del** softkey to remove an entry from the list.

Note: For information on how to use this feature see [“To decline an incoming call with a reason” on page 54.](#)

Viewing line information

You can see the username, domain, presence, IM active, redial option and feature activation information for each user logged into the telephone.

To view user information

- 1 Press the **View** softkey. If there is more than one user logged in to the telephone then you will be prompted to press the Line button for the user information you want to query.
- 2 Select the **Line Information** option and press the **Select** softkey. The information corresponding to the user assigned to that line appears on the display. Use the up and down navigation buttons to scroll through the information.
- 3 Press the **Ok** softkey to return to the View menu.

Using the inbox options

Your i2002 Internet Telephone maintains an inbox list of calls that you returned. You can access this list through the **View** softkey or, by pressing the inbox quick button

When your telephone is idle and you access the inbox, the following softkey options appear:

Press	To ...
Call	Dial the inbox entry.
All/Missed	Toggle between the inbox lists of all or missed calls.
Del	Delete an entry from the inbox.
Ok	Return to the idle display.

When you are on an active call and you access the inbox, the following softkey options appear:

Press	To ...
Select	Dial the inbox entry.
Cancel	Return to the active call display.

Tip: Use the right navigation button to access the details information to the right of the screen. Use the left navigation button to scroll back to the previous screen.

To call an inbox entry

From an idle display

- 1 Press  .
(Use the navigation buttons to choose a particular user if more than one user is logged in and, press the **Select** softkey to access that inbox.)
- 2 Choose an entry or enter the number associated with the entry.
- 3 Press the **Call** softkey to dial the entry and return the call.

To call an inbox entry while on an active call

- 1 Press  .

- 2 Choose an entry or enter the number associated with the entry.
- 3 Press **Select**. The active call is automatically put on hold and the new call rings.

Saving an inbox entry to the address book

If you enter a nickname for an entry that you save in your address book, then that name appears on your display when the person calls you. To save an entry in your inbox to your address book

- 1 Choose the entry and press the right navigation button to access entry details.
- 2 Press the **Save** softkey. The display prompts, "Save as >". You can change the entry text. Use the left navigation button to erase the existing text if you need to add new text.
- 3 Press the **Save** softkey again. The display prompts "Add to Friends?".
- 4 Press the **Yes** or **No** softkey.

Note: You cannot save an inbox entry to the address book while you are on an active call.

Deleting an inbox entry

To remove an entry from your inbox

- 1 Press  .
- 2 Choose an entry or enter the number associated with the entry.
- 3 Press the **Del** softkey.
- 4 To delete the single entry press **Ok**.

To delete all the entries from a particular caller press the **AllUsr** softkey. To delete all of the inbox entries press the **All** softkey.

Managing your address book

The i2002 Internet Telephone allows you to keep a list of addresses.

Tip: Use the right navigation button to access to entry access details, including presence status. Use the left navigation button to scroll back to the previous screen.

Accessing your address book

To access your address book and make a call

- 1 Press . (Or press the **View** softkey, choose the address book option and press the **Select** softkey.)
- 2 Use the navigation buttons to choose an entry.
- 3 Press the **Call** softkey to place a call.

Adding an entry

To add an entry to the address book

- 1 From the address book screen, press the **Add** softkey.
- 2 Enter the name and press the **Ok** softkey.
- 3 Enter address and press the **Ok** softkey. The display prompts you "Add to Friends?".
- 4 Press the **Yes** or **No** softkey.

Removing an entry

To remove an entry from the address book

- 1 Choose the entry in the address book.
- 2 Press the **Modify** softkey and then the **Del** softkey. The display changes to a confirmation screen.
- 3 Press the **Ok** softkey to delete the entry or **Cancel** to cancel the deletion.

Editing an entry

To edit or change a address book entry

- 1 Choose the entry in the address book.
- 2 Press the **Modify** softkey.
- 3 Edit the name and press the **Ok** softkey.

Tip: The **Delete** softkey permanently removes this entry from the address book.

- 4 Edit the address and press the **Ok** softkey.

Tip: The **Back** softkey returns you to the edit name display.

- 5 If the entry is a friend, then the display prompts you "Remove from Friends?". If the entry is not in the list of friends, then the display prompts "Add to Friends?".
- 6 Press the **Yes** or **No** softkey.

Managing your outbox

The i2002 Internet Telephone keeps a list of all your outgoing calls.

Accessing your outbox

To access your outbox and make a call

- 1 Press . (Or press the **View** softkey, choose the **Outbox** option and press the **Select** softkey.)
- 2 Use the navigation buttons to choose an entry or enter the number associated with the entry.

- 3 Press the **Call** softkey to dial the entry.

Tip: Use the right navigation button to access the information to the right of the screen. Use the left navigation button to scroll back to the previous screen.

Deleting an outbox entry

To remove an entry from your outbox

- 1 Press  .
- 2 Use the navigation buttons to choose an entry or enter the number associated with the entry.
- 3 Press the **Del** softkey.
- 4 To delete the single entry press **Ok**.

To delete all the entries from a particular caller press the **AllUsr** softkey. To delete all of the outbox entries press the **All** softkey.

Saving an outbox entry to the address book

To save an entry in your outbox to your address book

- 1 Choose the entry and press the right navigation button to access entry details.
- 2 Press the **Save** softkey. The display prompts, "Save as >". You can change the entry text.
- 3 Press the **Save** softkey again. The display prompts "Add to Friends?".
- 4 Press the **Yes** or **No** softkey.

Chapter 6

Advanced features and services

The Services menu gives you access to many advanced i2002 Internet Telephone features:

#	Services menu option
1	Stock Query
2	Send IM
3	Call Forward
4	Do Not Disturb
5	User Login
6	User Logout
7	Retrieve Parked Call
8	Global Search
9	Program key

Tip: For quick selection, press the number on the dialpad that corresponds to the menu item. Use the up and down navigation buttons to scroll through the Services menu list. The * button takes you to the beginning of a list and the # button takes you to the end of a list.

Note: Some menu options allow you to configure or view parameters that are specific to a line. If there are multiple users logged in to the telephone then you will be prompted to select your line button.

Stock query

Your i2002 Internet Telephone can be set up to display stock quotes on the display.

Note: This feature may not be activated for your system. Contact your system administrator for more information.

To setup the stock query feature

- 1 Select the **Servcs** softkey.
- 2 Choose the **Stock Query** option and press the **Select** softkey.
- 3 Enter the symbol of the stock that you want to query. The default mode for entering a stock symbol is alphanumeric. Use the left navigation button to delete individual characters. The **Clr** softkey deletes the entire line.
- 4 Press the **Query** button. The display may change briefly to show that the query is in progress. When the query is complete, the result is displayed.
- 5 Press the **Save** softkey.
- 6 Press the **Add** softkey to add this stock query to a bulletin that displays on your screen. You can also query for another stock or press the **Cancel** softkey to go back to the idle display.

Tip: For a shortcut to the stock query option press the button and use the navigation buttons to scroll through the options.

To remove a stock query entry

To remove a stock query

- 1 Select the **Servcs** softkey.
- 2 Choose the **Stock Query** option and press the **Select** softkey.
- 3 Enter the symbol of the stock that you want to delete from your Stock Query Bulletin list. The default mode for entering a stock symbol is alphanumeric.

- 4 Press the **Query** button. The display may change briefly to show that the query is in progress. When the query is complete, the result displays.
- 5 Press the **Save** softkey. The display prompts you to remove the stock.
- 6 Press the **Remove** softkey to delete this entry.

Instant messaging

You can send a message that will appear on the telephone display of another user on the system.

To send an instant message

- 1 Select the **Services** softkey.
- 2 Press the down navigation button to choose the **Send IM** option and press the **Select** softkey.
- 3 Enter the recipient's address (for example, jdoe2@domain.com).
- 4 Press the **Next** softkey.
- 5 Enter your message text.
- 6 Press the **Send** softkey.

You can press the **Next** softkey enter another text message and, press the **Send** softkey to continue sending IMs to this same address.

Tip: For a shortcut to the Send IM option press the button and use the navigation buttons to scroll through the options..

Send an IM to an entry in the inbox, outbox or address book

To send an instant message to an entry in your address book or outbox

- 1 Select the **Services** softkey.
- 2 Press the down navigation button to choose the **Send IM** feature and press the **Select** softkey.

- 3 Press an **Inbox**, **Outbox** or **Address Book** quick button.
- 4 Choose an entry and press the **Select** softkey.
- 5 Enter your message text.
- 6 Press the **Send** softkey. A confirmation message appears.

Handling incoming instant messages

When your i2002 Internet Telephone beeps to alert you of a new instant message (IM), you can

- 1 Use the navigation buttons to scroll through the IM text.
- 2 Use the **Detail** softkey to view details about the IM
 - Press **Call** to call the sender of the IM.
 - Press the **Reply** softkey to reply to an IM. Enter a text message and, select the **Send** softkey, or **Cancel** to return to the idle display.
- 3 Use the **Prev** and **Next** softkeys if you have more than one IM to view.
- 4 Press the **Cancel** softkey to clear all IM messages.

Note: The i2002 Internet Telephone can only display ten instant messages at a time. The eleventh instant message sent to your telephone will be dropped. It is important to clear your instant messages.

Call forward

You can forward your calls to other locations with your i2002 Internet Telephone Call forward feature. This feature may override routing rules you have set up through the Personal Agent.

Tip: If you are logged into multiple Internet Telephones, every line associated with you will have call forwarding enabled.

Forwarding a call

To forward your calls to another location

- 1 Press the **Servcs** softkey.
- 2 Press the down navigation button to choose the **Call Forward** option and press the **Select** softkey. (See Note below if there is more than one user logged in.)
- 3 Enter the destination address, or press an **inbox**, **outbox** or **address book** quick button and select an entry from the list.
- 4 Press the **Frwrđ** softkey. The display beside the line button periodically changes to indicate that calls are now forwarded and the telephone icon appears hollow.

Note: If there is more than one user logged into the i2002 Internet Telephone then you must press the line button next to the line you want to forward. Or, press the **Ok** softkey to forward the primary line.

Tip: You can still place outgoing calls, even though your line is forwarded to another location.

Canceling a forwarded call

To cancel call forwarding on your line

Tip: If you are logged into multiple Internet Telephones, every line associated with you will have call forwarding canceled.

- 1 Press the **Servcs** softkey.
- 2 Press the down navigation button to choose the **Call Forwarding** option and press the **Select** softkey.
- 3 Press the **Ok** softkey to cancel forwarding for the primary line. If there is more than one user logged in then you will be prompted to press the line

button next to the line that you wish to cancel forwarding.
When you press the forwarded line button, call forwarding is canceled immediately.

Do Not Disturb (DND)

The Do Not Disturb feature blocks all calls on a per line basis and prevents them from ringing on your i2002 Internet Telephone. If your i2002 Internet Telephone is the only device defined in your active ring list then any incoming calls will be directly sent to the next ring list. If you have multiple contacts listed in your current ring list then the other devices will continue to ring for the defined number of rings before the call moves to the next ring list.

Tip: For more information about creating a ring list refer to the *Personal Agent User Guide*.

- 1 Press the **Servcs** softkey.
- 2 Press the down navigation button to choose the **Do Not Disturb** option and, press the **Select** softkey.
- 3 Press the **Ok** softkey to enable Do Not Disturb. Incoming calls do not ring. The display beside the line button periodically changes to indicate that DND is active and the telephone icon appears hollow.

Cancelling DND

The line button telephone icon and text indicates that you have the DND feature activated. To disable DND, press the **DND** softkey on the idle display and confirm the cancellation. To cancel DND through the Services menu

- 1 Press the **Servcs** softkey.
- 2 Press the down navigation button to choose the **Do Not Disturb** option and press the **Select** softkey.
- 3 Press the **Ok** softkey to disable Do not Disturb.

User login

To log in as an i2002 Internet Telephone user

- 1 Press the **Servcs** softkey.
- 2 Press the down navigation button to choose the **User Login** option and, press the **Select** softkey.
- 3 Enter your user ID and press **Login**.
- 4 Enter your password and press **Login**.
- 5 Choose your location and press **Select**.
- 6 Enter an amount of time (press the **Days/Hours** softkey to toggle between the two) and press **Timed** or, press the **Login** softkey to use the network provisioned values.

User logout

To log out as an i2002 Internet Telephone user

- 1 Press the **Servcs** softkey.
- 2 Press the down navigation button to choose the **User Logout** option and press the **Select** softkey. The screen prompts you to indicate your line (if there is more than one user logged in) and then for your password. If you press the **Ok** softkey then the primary line key user is automatically selected.
- 3 Enter your password.
- 4 Press the **Out** softkey.

Retrieve parked call

You can retrieve a call that is parked on the system if you have the call ID.

- 1 Press the **Servcs** softkey.

- 2 Press the down navigation button to choose the **Retrieve Parked Call** option and press the **Select** softkey. The screen prompts you to enter the call ID.
- 3 Enter the call ID and press **Ok**. You are connected with the call and the display shows all of the active call softkeys.

Tip: If there is already a call parked for you, and you access the Retrieve Parked Call option then you will be prompted to choose between retrieving the call parked specifically for you or entering another call ID.

Global Search

You can search through the global address book of all users on your system in order to call or add entries to your personal address book.

Tip: Use the * (star) character to indicate a wild card in the search string. Enter the star character by pressing the * button on the keypad or through the special characters available with alphanumeric dialing (refer to [“Entering alphanumeric characters” on page 21](#)).

- 1 Press the **Servcs** softkey. Or, press the **Srch** softkey on the idle display and go to step 3.
- 2 Press the down navigation button to choose the **Global Search** option and press the **Select** softkey. The display prompts you to choose the method of search. Options include; **User Name**, **Name**, **Last Name**, **First Name** and **Phone Number**. Use the up and down navigation buttons to scroll through the options.
- 3 Highlight an option and press **Select**. The display prompts you to enter the characters to search.

- 4 Enter the characters (letters or numbers) for the search and press the **Ok** softkey. The entries, (up to a maximum of 100), that match your search parameter appear on the display.

Tip: Use the right navigation button to view the presence details of the entry you have highlighted. Press the **Call** softkey to place a call to this entry. Press the **Save** softkey to save this entry to your personal address book.

- 5 Press the **Srch** softkey to continue searching the global address book or press the **Cancel** softkey to return to the idle display. You can call the entry and also save it to your personal address book.

Program Key

With a simple press of a button, the unused line keys on your i2002 Internet Telephone can simplify everyday features that you use. You can program keys to:

- speed dial to an address or number
- send an IM to a specific person
- activate Do not Disturb
- forward your calls
- change your presence status
- make a stock query

In the case where there are multiple users, the following rules apply:

- if there are multiple users logged in then the primary line users' programmed line buttons occupy the unused line buttons. When the primary line user logs off then the programmed line buttons for the second user appear.
- multiple users who log in after the primary line, occupy the line buttons sequentially and override any programming
- when a user logs off, the line button returns to its former programming
- multiple users may program any unoccupied line buttons

- when the primary line user logs off, then the second line button users programming appears on unoccupied line buttons

Note: The primary line key (1) is not available for programming.

To program a key

- 1 Press the **Servcs** softkey.
- 2 Press the down navigation button to choose the **Program Key** option and press the **Select** softkey. The display lists the unused line keys that are available to program. Use the up and down navigation buttons to scroll through this list.
- 3 Locate the line key you want to program and press the **Set** softkey. The display lists the feature options that are available. Use the up and down navigation buttons to scroll through this list.
- 4 Scroll to the feature you want to program and press the **Set** softkey. The display prompts you to enter a text label for this key. The text label will appear beside the line key at the top of your telephone.
- 5 Follow the prompts to enter the information to program this key.

Remove a programmed key

To delete a programmed key

- 1 Press the **Servcs** softkey.
- 2 Press the down navigation button to choose the **Program Key** option and press the **Select** softkey. The display lists the unused line keys that are available to program. Use the up and down navigation buttons to scroll through this list.
- 3 Highlight the key you want to delete and press the **Remove** softkey. The text label for the key is deleted. The key is once again available as a line key or for programming.

Chapter 7

Troubleshooting

This section includes instructions for resolving some common problems that you may encounter.

Locating the MAC address

Examine your i2002 Internet Telephone set. The white label on the left of the set shows a series of numbers. The last number is the MAC address (similar to 00 60 38 XX XX XX). Write this sequence down for later use. The following picture shows the MAC address label:

Manually restarting your i2002 Internet Telephone

There are two ways that you can manually restart your i2002 Internet Telephone

- 1 Power cycle (unplug and replugin) your phone, or

- 2 Press the **Config** softkey and select the **Reset Phone** option.

Call does not connect

Before reporting a network problem ensure that you are using the correct address to call someone.

Using SIP addresses versus IP addresses

Rather than dialing an IP address (for example, ron@12.134.47.78), remember to use the SIP address (for example, ron3@acme.com). The proxy server that routes the call may serve multiple domains and would not know the domain where a user IP address resides.

Domain name

You must enter the domain (for example, @acme.com) if the person you are calling is not in *your* domain.

Note: The domain name in a user address may not be an Internet domain.

Call is connected but there is no audio

If you are using the handset, check to ensure that the headset button is not activated. The bright red LED light beside the button indicates when the headset option is active. When the headset option is active, and even if there is not headset plugged in, you cannot receive or transmit audio through the handset.

Changing audio settings

The i2002 Internet Telephone allows you to change speech codec settings, while on a call, to achieve better audio quality. The term codec is an acronym that stands for "Compression/Decompression". The codec setting controls how speech compresses/decompresses into digital packets for transmission over the network. Each codec selection provides a framesize in milliseconds for encoding the speech packets. The larger the framesize, the less packets are required and so the greater the efficiency of transmitting speech over the network. However, it also means that the speech delay is increased on the call.

Note: The changed setting only applies to the current active call. The settings return to default for the next call.

A general rule for selecting the codec and framesize is as follows:

High quality	Medium quality	Low quality
PCMU 20 ms PCMA 20 ms G729A 20 ms	PCMU 30 ms PCMA 30 ms	G729A 30 ms

- 1 During an active call, press the **Audio** softkey.
The display shows two choices:
 1. Change audio setting.
 2. Monitor audio quality.
- 2 Select the **Change audio setting** option and press **Ok**.
- 3 Use the navigation buttons to highlight the desired quality setting and press **Select**. The system applies the new audio settings.

Tip: Your system administrator sets the default codec and framesize for all your calls.

Quality of service information

In order to improve your service or perhaps, to determine a solution to a quality issue, your service provider may ask you to record quality of service information for your calls.

To view quality of service information for an active call

- 1** Press the **Audio** softkey.
- 2** Select the **Monitor audio quality** option.
- 3** Note the information displayed for the media stream of this call.

Appendix A

Using the Multimedia PC Client and the i2002 Internet Telephone

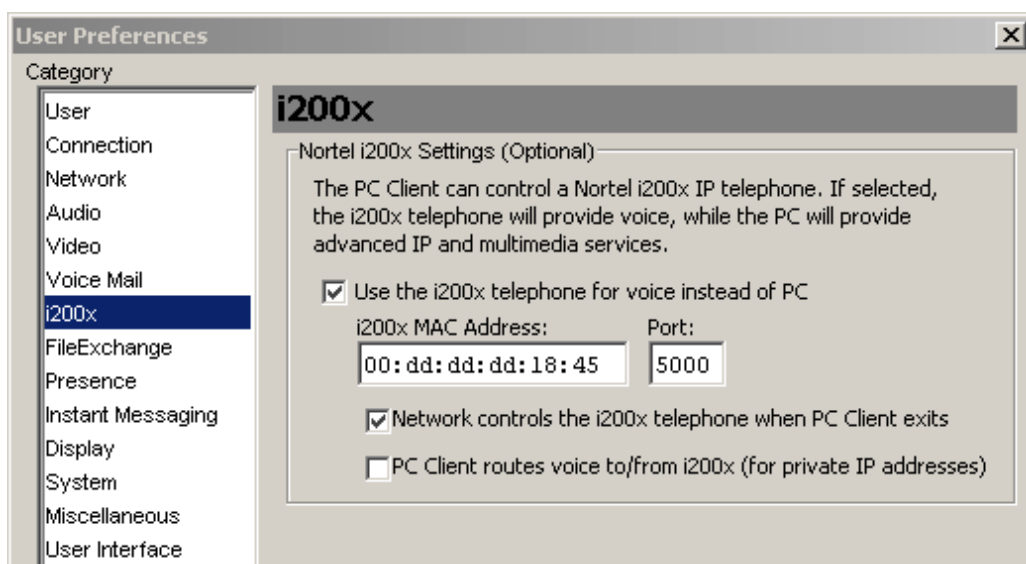

You can use your i2002 Internet Telephone to provide premium-quality voice communication while your PC, with the Multimedia PC Client, provides advanced IP and multimedia services. For more information about this Multimedia Client Set refer to the *Multimedia PC Client User Guide*.

Note: You must be logged in to both the i2002 Internet Telephone and the Multimedia PC Client in order for the Multimedia Client Set to work.

To set up your Multimedia PC Client to control your i2002 Internet Telephone

- 1 Select **Tools > Preferences** and the **i200x Internet Telephone** list item. The i200x window displays.

84 Using the Multimedia PC Client and the i2002 Internet Telephone

- 2** Check **Use the i200x...** to indicate that you want the i2002 Internet Telephone to provide premium-quality voice while the PC provides advanced IP and multimedia services.
- 3** Enter the port number (and optionally the MAC address) for the i2002 Internet Telephone.

Tip: The Multimedia PC Client can automatically detect and fill in the MAC address field with information it obtains from the first Internet Telephone that attempts to contact it on the port specified in Step 4.

- 4** Check whether you wish the network to take over control of the i2002 Internet Telephone when the Multimedia PC Client exits. The default is that this feature is activated. This step is optional.
- 5** Check whether the Multimedia PC Client should route voice to/from the telephone set for private IP addresses. This option may be required if you are using a private LAN in a home office. In this case, the S1 (server 1) and S2 (server 2) settings on the i2002 Internet Telephone must be set to the PC's IP address in order for the Multimedia PC Client to control the phone. Refer to [Appendix B, "Setting DHCP parameters," on page 85](#), for instructions. This is not usually required for work office use. The default for this feature is not active. This step is optional.
- 6** Click **Ok** to save your changes or **Cancel** to exit without saving.

i2002 Internet Telephone indicator

The Multimedia PC Client main window has a status area with a telephone icon. This icon lights up when the Multimedia PC Client controls the i2002 for voice telephone.

Appendix B

Setting DHCP parameters

After you power up your i2002 Internet Telephone, if the display indicates that the server is unreachable and it continuously resets then you need to configure some parameters.

Server unreachable restarting ...

Things to consider when setting parameters

- Enter requested information in the menu fields by pressing the number keys on the dialpad. Press the * key to enter a period (".") when entering an IP address.
- To record the entry and advance the initialization to the next parameter, press **Ok**.
- To abandon the manual configuration process and restart the power-up, press **Cancel**.
- If you enter parameters manually, use the **BKSpace** or **Clear** softkeys to edit the default entry. **BKSpace** deletes each character as the key is pressed. **Clear** deletes the entire entry.
- Each parameter must have a corresponding entry. An audible beep notifies you if you attempt to advance to the next parameter without a field entry.

Begin the initialization process

To begin the initialization process, at the flashing Nortel Networks screen, quickly press each of the four softkeys (located at the bottom of the display screen) once, pressing from left to right.

Tip: If you miss the flashing introduction screen, unplug and plug in your i2002 Internet Telephone to reach the configuration screen where you can press the softkeys.

If your network supports DHCP go to [page 86](#). If your network does not support DHCP go to [page 87](#).

If your network supports DHCP

- 1 If your i2002 network supports DHCP, enter the configuration parameters at the prompt in the display area of your phone as described in the following table.

Tip: You may need to contact your system administrator to check whether your network supports DHCP.

Parameter	Value	Definition
DHCP (enable)	1	Yes
DHCP (full or partial)	1	Partial
S1 IP	<valid Server IP address>	Primary server (IP Client Manager or Multimedia PC Client) IP address
S1 PORT	5000	Primary server port
S1 ACTION	1	Primary action code (must be set to 1)
S1 RETRY Count	1	Primary retry count

Parameter	Value	Definition
S2 IP	<valid Server IP address>	Secondary server (IP Client Manager or Multimedia PC Client) IP address Note: If you do not know the secondary IP address, use the primary IP address for the secondary address.
S2 Port	5000	Secondary server port Note: If you do not know the secondary port, use the primary port.
S2 ACTION	1	Secondary action code (must be set to 1)
S2 RETRY COUNT	1	Secondary retry count
VLAN (0=No, 1=Yes)	0	QoS 802.1q VLAN Tag Service

Warning: The VLAN parameter should never be selected unless the underlying network switches have been configured to filter on VLAN IDs. Otherwise, the i2002 may fail to work properly.

After pressing the **Ok** softkey on the last configuration parameter, you will see a message "Locating Server".

If your network does not support DHCP

If your network does not support DHCP

- 1 Enter a **0** on the dialpad, to indicate that DHCP is not supported.

88 Setting DHCP parameters

- 2** Follow the prompts to set all necessary parameters as described in the following table.

Parameter	Value	Definition
SET IP	<valid IP address>	IP address of your i2002 Internet Telephone provided by your system administrator
NETMSK	<valid subnet mask>	Subnet Mask provided by your system administrator
DEF GW	<valid Default Gateway>	Default gateway IP network address provided by your system administrator
S1 IP	<valid Server IP address>	Primary server (IP Client Manager or Multimedia PC Client) IP address
S1 PORT	5000	Primary server port
S1 ACTION	1	Primary action code (enter 1 for UNISim)
S1 RETRY Count	1	Primary retry count
S2 IP	<valid Server IP address>	Secondary server (IP Client Manager or Multimedia PC Client) IP address Note: If you do not know the secondary IP address, use the primary IP address for the secondary address.
S2 Port	5000	Secondary server port Note: If you do not know the secondary port, use the primary port.
S2 ACTION	1	Secondary action code (enter 1 for UNISim)
S2 RETRY COUNT	1	Secondary retry count
VLAN (0=No, 1=Yes)	0	QoS 802.1a VLAN Tag Service

Warning: The VLAN parameter should never be selected unless the underlying network switches have been configured to filter on VLAN IDs. Otherwise, the i2002 may fail to work properly.

After pressing the **Ok** softkey on the last configuration parameter, you will see a message "Locating Server".

Where to go next

After the i2002 Internet Telephone has successfully located the server, follow the instructions in the following table.

If ...	Then
<div>the telephone successfully connects to the server and the display prompts you to enter an activation key</div> <div><div>Activation key ></div><div>OkAlphaLang</div></div>	<div>go to "Step 1: Enter an activation key" on page 5.</div>
<div>the telephone successfully connects to the server and the location prompt appears</div> <div><div>1. Other06/06 9:31 am</div><div>Select</div></div>	<div>you are ready to use your telephone. Go to "Step 3: Choosing your location" on page 7.</div>

Appendix C

Customer support

You can order the following parts and supplies for your i2002 Internet Telephone from your authorized distributor as follows:

Description	Part number
Power supply - North America	A0619627
Power supply - Europe	A0619635
Power supply - Australia, New Zealand	A0647042
Power supply - Japan	A0828858
Power supply - Ireland	A0656598
Ethernet cat 5 cable (7 foot)	A0648375
Footstand assembly - (charcoal color used for both ethergray and charcoal models)	A0891619
Handset (ethergray)	A0788874
Handset (charcoal)	A0758634
Handset cord (ethergray)	A0987725
Handset cord (charcoal)	A0792037
Headset	A0779338
Number card	P0744243
Number card lens	P0744242

For help finding an authorized distributor call 1(800) 4NORTEL or (800) 466-7835.
